

Brazil Election Autopsy - Season 1 (2022/10/02)

The main objective of this project is to facilitate public access to the data of the Brazilian election that took place in 2022/Oct/02 .

It's separated in 3 subprojects.

tse_public_data/

Guidance on obtaining and exporting the **public available data** of the Voting Machines of the election in Brazil from the TSE website.

- TSE stands for: "Tribunal Superior Eleitoral" ("Superior Electoral Court").

bu_statistics/

A Dart program that analyses and generates statistics from the extracted information from the Voting Machine files (".bu" files).

- BU stands for "Boletim de Urna" (Ballot Box).

analysis/

Directory with statistical analysis of the BU files of the Brazilian election, separated by state (UF) in Brazil.

- UF stands for a state in Brazil.

tools/

Scripts to generate HTML and PDF documents.

NOTES

This project provides all the tools and information to be fully reproduced. This project was built so that anyone can fully reproduce the analysis from scratch using the original data provided by the TSE website.

It's very important to have multiple different analysis of this data.

This is the first time that an election data (through electronic Voting Machines) is public available with this level of detail and for an entire country.
